**THE MAX** **SMART**

# GA480

## The fastest and smartest mixer in the market

Reduce the total mixing time by up to 50%

### ♥ The GA480 does the thinking

No matter what size or type of can, the mixer automatically determines the optimum mixing speed and time. All the operator needs to do is press a single button.

### 🌀 Faster homogenization

We enabled variable mixing speed for faster homogenization. Starting slowly, the colorant is well spread through the base paint. After speeding up, the machine varies in speed for faster and better results.

### ▶▶ Clamping in half the normal time

We managed to speed up clamping considerably, with a dedicated motor for this specific task. The GA480 has the highest clamping speed on the market.

### 🛠️ Stability at 230 RPM

A major speed influencer is stability, especially when mixing at high speed. To maintain stability up to 230 RPM, we developed a new technique called Dynamic Balance. Compare it to aligning car tires. By adding weight at strategic places on the wheel, you prevent the steering wheel from shaking at high speed.

### 👍 Easier and faster maintenance

Simply connect the mixer to the PC of your dispenser with a USB cable. Using the Fast & Fluid Maintenance application, you have access to all important diagnostics, can perform software updates, change the parameters, and more. Connected to internet? Enjoy this benefit from anywhere.

### The reliable choice

Before releasing the GA480, we thoroughly put the mixer to the test. Looking for speed, user-friendliness and business continuity? The GA480 sets the new industry standard. You can rely on it to mix to the max.

### Future-proof engineering

It often starts with a simple insight. To capture and combine trends, we share knowledge with our tinting partners, customers and suppliers. This allows us to sync our development processes leading to future-proof solutions.
